VACCINES ARE NOT SAFE OR EFFECTIVE

Dr. Eleanor McBean, Ph.D.

Vaccines are a major cause of health problems and disease. The mass vaccination of the population is an example of the triumph of false advertising hypnosis over fact. Vaccines are neither safe nor effective. Vaccination is a ritual of pagan origin. It is a religious rite. It is not a medical procedure. Vaccination is a ritual of pagan origin. It is not a medical procedure. Vaccination is a religious rite. Vaccination is a ritual of pagan origin. It is not a medical procedure. Vaccination is a religious rite.

Items 1 through 3 in section 1 of the Nuremberg Code state that the voluntary consent of the human subject is absolutely essential. This means that the person involved should have legal capacity to give consent; should be so situated as to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, overreaching, or other ulterior form of constraint or coercion; and should have sufficient knowledge and comprehension of the elements of the subject matter involved as to enable him to make an understanding and enlightened decision. This latter element requires that before the acceptance of an affirmative decision by the experimental subject there should be made known to him the nature, duration, and purpose of the experiment; the methods and means by which it is to be conducted; all inconveniences and hazards reasonably to be expected; and the effects upon his health or person which may possibly come from his participation in the experiment.

I am now going to list the common problems associated with vaccines in general. I will then document these problems by close citations of specific commonly used vaccines, many of which are given in "mandatory" vaccinations by pediatrician to defenseless infants and children.

Items [problems]:

1) Vaccines frequently cause at best only limited short-term protection against the disease they are intended to protect against.

2) Vaccines commonly cause - give the disease they are intended to protect against.

3) Vaccines are commonly contaminated with other live viruses and bacteria which cause many other illnesses and diseases shortly after the vaccination and up to many years later.

4) Vaccines contain large numbers of poison chemical compounds and toxins, which can cause adverse reactions, e.g. sickness, disability, and death, immediately or later.

Physicians and public health officials regularly lie to parents and the general public about these vaccine effectiveness and safety.

Item 1 problem a:

a) Polio vaccine - The polio death rate in the United States declined on its own by 47% from 1923 to 1953. A similar decline occurred in European countries where polio vaccine is not in use. There is credible evidence that the decline in polio deaths was largely completed before the vaccine was introduced.

[Salk vaccine 1955 and Sebin 1959] many European countries questioned their effectiveness and refused to systematically inoculate their populations. Despite the decline in the rate before this vaccine, polio epidemics occurred in vaccinated populations.

The number of reported cases of polio following mass inoculations with the Salk vaccine jumped dramatically.(46) For example, when comparing the 1955 rate with the average annual rate for the previous five years, the reported rate in 1956 was 47% higher in Massachusetts (94% increase), 136% higher in Connecticut (136% increase), Rhode Island (644% increase), New Hampshire (229% increase), Connecticut (92% increase) and Massachusetts (642% increase).

Doctors and scientists at the National Institutes of Health knew the Salk vaccine was ineffective and deadly: "Workers as preventive and dangerous in 1955." (47) Dr. Leone Chapple, Director of Communicable Disease Control in Canada, stated in 1955: "Polio is on the decline. The Salk vaccine is dangerous." (48) Dr. Thomas Francis, Jr., who headed Foundation for Research on Infectious Diseases at the University of Michigan, which conducted the field trials, stated: "Even if the false proclamation claiming the vaccine was safe and 100% effective.(49) Recall the Tuskee, Alabama, syphilis experiments carried out by the U. S. Public Health Service in which it was held to be totally beneficial to withhold treatment. (50,51) Dr. Thomas Parran, U. S. Surgeon General, stated: "It would be not only unjustifiable but not sinful cause" all syphilitic polio cases in the United States since 1941.(59) **The Centers for Disease Control (CDC) currently admits that the five-in-four vaccine of Dr. Salk has no effect on the incidence of polio.** (52,53,54,55,56,57,58)

Polio is a contagious disease caused by an intestinal virus that may attack nerve cells of the brain and spinal cord. Symptoms include fever, headache, sore throat, vomiting, and nausea. Serious develop sometimes occur, resulting in paralysis. Polio is rare in the U.S. today, but it can be deadly. It usually strikes children. Most cases of one or more limbs or respiratory muscles. In an apparent attempt to make the Salk polio vaccine and the Sabin oral vaccine seem successful against polio, the definition of polio has been changed. Cases of paralytic polio are now called "polio." Cases of non-paralytic polio are now called "aseptic meningitis." A great success story!
